

Git & GitHub Assignment Submission

Student Information

Name: Goutham Vaishnav

GitHub Username: Gouthamvaishnav11

Repository URL

<https://github.com/Gouthamvaishnav11/git-assign>

Pull Request URL

<https://github.com/Gouthamvaishnav11/git-assign/pull/new/feature/add-cleaning-logic>

Git Workflow Completed

1. Git Configuration

Configured Git username and email:

- user.name = Gouthamvaishnav11
- user.email = gouthamvaishnav2@gmail.com

Verified configuration using:

```
git config --list
```

2. Repository Initialization

Initialized a local Git repository using:

```
git init
```

3. Project Structure Creation

Created the following files:

- README.md
- requirements.txt
- .gitignore
- extract_order.py
- clean_order.py
- load_order.py

4. .gitignore Configuration

Added rules to ignore:

- .env
- data/
- logs/
- *.csv
- *.parquet
- **pycache/**
- .ipynb_checkpoints/

5. Initial Commit

Commit Message:

Create initial ETL project structure

6. ETL Pipeline Updates

Added print statements to:

- extract_order.py
- clean_order.py
- load_order.py

Commit Message:

Add ETL pipeline print statements

7. GitHub Remote Setup

Connected local repository to GitHub and pushed the main branch.

8. Feature Branch Creation

Created feature branch:

feature/add-cleaning-logic

9. Cleaning Logic Update

Added placeholder cleaning logic comments explaining removal of invalid rows where amount <= 0.

Commit Message:

Add order cleaning logic placeholder

10. Feature Branch Push

Pushed feature branch successfully to GitHub.

Commit History

c69d1ce Add order cleaning logic placeholder

05bf8cb Add ETL pipeline print statements

f70acbc Create initial ETL project structure

Why .env and Data Files Were Ignored

The .env file contains sensitive information such as passwords, API keys, and credentials. Committing these files could expose confidential data publicly.

The data directory contains raw datasets that may become large and change frequently. Data files are generally stored outside Git repositories to keep repositories lightweight and maintainable.

The logs directory contains generated runtime logs that do not need version control because they can be recreated whenever the application runs.

Validation Checklist

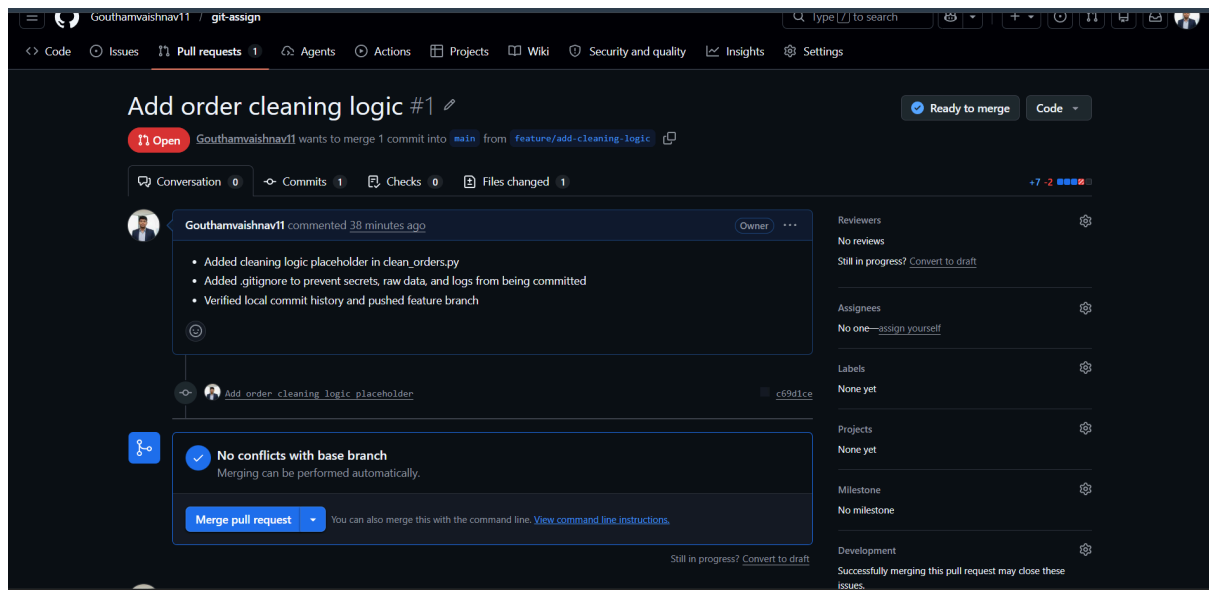

- [x] Repository is visible on GitHub
- [x] Feature branch created
- [x] Pull Request URL generated
- [x] At least 2 meaningful commits exist
- [x] .gitignore configured correctly

[x] Main branch pushed successfully

[x] Feature branch pushed successfully

[x] Commit messages are professional

[x] Git workflow completed successfully

```

The screenshot shows the GitHub interface for a repository named 'git-assign' by user 'Gouthamvaishnav11'. The repository is public and has 2 commits, 2 branches, and 0 tags. A notification at the top states 'Your main branch isn't protected' with options to 'Dismiss' or 'Protect this branch'. The commit history table lists the following files and their commit messages:

File	Commit Message	Time Ago
.gitignore	Create initial ETL project structure	51 minutes ago
README.md	Create initial ETL project structure	51 minutes ago
clean_order.py	Add ETL pipeline print statements	48 minutes ago
extract_order.py	Add ETL pipeline print statements	48 minutes ago
load_order.py	Add ETL pipeline print statements	48 minutes ago
requirements.txt	Create initial ETL project structure	51 minutes ago

Below the table is a 'README' section. On the right side, the 'About' section is empty, and the 'Releases' and 'Packages' sections also show no published content. The 'Contributors' section lists 'Gouthamvaishnav11' as the sole contributor.
